**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5, 7-9, 14-16 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Yu (US 6,506,650).

Yu discloses the limitations of:

Performing a first ion implantation process (24, fig. 1) to form a first doped region in the substrate;

Sequentially forming a dielectric layer (30, fig. 2) and a sacrificial layer (32, fig. 3) on the substrate;

Forming a L-shaped spacer (28, fig. 2) on either side of the gate;

Performing a second ion implantation (40, fig. 42) process to form a second doped region with a gradient profile in portions of the substrate adjacent to either side of the L-shaped spacer; and

Performing a self-aligned silicide(silicide) process to form a silicide layer on the gate and on exposed portions of the substrate surface above the second doped region (46, 48, fig. 7) (col. 3, ln. 7 - 34).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6, 10-13, 17-21 and 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yu (US 6,506,650) in further view of Lee et al. (US 5,153,145).

Yu disclose the claimed invention, as disclosed above, except the limitations disclosed by Lee:

Wherein the sacrificial layer comprises polysilicon (23, fig. 4) (col. 3, Ins. 1-2);  
and

Performing a RTP, wet etch and second RTP(col. 4, Ins. 42-52), because these are methods known in the art to form salicidation (salicide).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine Yu with Lee, because Lee the polysilicon in Lee was equivalent to the oxides in Yu as masking materials and Lee is more explicit in describing a salicide process whereas Yu did not. Also, cobalt Co is a refractory metal like those disclosed in Lee and are considered art recognized equivalents due to there electrical properties being similar.
